NOTICE: #15-M06

DATE: May 6, 2015

SUBJECT: Leap Second Impact Notice

On June 30, 2015, a leap second will be applied to Coordinated Universal Time after 23:59:59 GMT / 19:59:59 EDT / 18:59:59 CDT. A leap second is a second which is added in order to synchronize atomic clocks with astronomical time, and to keep clocks as accurate as possible.

No Impact to Eris Exchange Systems

Eris Exchange utilizes industry-standard time synchronization systems that rely on atomic time sources to maintain accuracy. The addition of the leap second will take place outside of Eris Exchange operating hours and is anticipated to have no effect on trading or operational systems. Eris Exchange systems will automatically synchronize and take into account the addition of the leap second.

Firms experiencing any leap second related issues should contact the Eris Control Center at ErisControlCenter@erisfutures.com or 888-587-2699, Option 1.
